

REQUEST TO COMPLETE PHASE I ORTHODONTIC TREATMENT

It has been explained by the staff at Starr and Glick Orthodontics that Phase I of a two phase orthodontic treatment has been completed and orthodontic appliances are ready to be removed. I am satisfied with the Phase I orthodontic result that has been achieved and authorize the removal of orthodontic appliances. I understand that a second phase of orthodontic treatment is almost always required for best results once most of the permanent teeth have erupted. I am aware that Phase II treatment requires separate fees from those paid for Phase I.

The practice will continue to regularly monitor the patient's orthodontic status and advise when Phase II treatment should commence. In the interim, retainers may be required to best maintain the result achieved in Phase I. At some point, these retainers will no longer fit properly as the baby teeth are lost and the permanent teeth emerge. Phase II treatment generally begins shortly thereafter. Orthodontic relapse is occasionally observed between Phases I and II of treatment and most problems can be corrected in Phase II.

In most cases, broken, lost or discolored retainers should be replaced. The fee for these replacement retainers is **\$300.00** each.
